Subject: Automatic Number Identification Digits (ANI II) for Pay Phone Compensation

The Industry Numbering Committee (INC) has approved a revised definition for ANI II information digit 24, and has instructed the North American Numbering Plan Administration to add a new ANI II digit, Code 25, as a subset of the original ANI II digit 24. These ANI II digits identify 800 Service calls that are translated to POTS numbers originating from non-pay stations or pay phones. The following revised definition replaces the definition for ANI II Code 24, and adds the definition for ANI II Code 25, as it will appear in the December 1, 1998 Local Exchange Routing Guide (LERG.)

ANI II DIGITS	DEFINITIONS
24	Code 24 identifies a toll free service call that has been translated to a Plain Old Telephone Service (POTS) routable number via the toll free database that originated for any non-pay station. If the received toll free number is not converted to a POTS number, the database returns the received ANI code along with the received toll free number. Thus, Code 24 indicates that this is a toll free service call since that fact can no longer be recognized simply by examining the called address.
25	Code 25 identifies a toll free service call that has been translated to a Plain Old Telephone Service (POTS) routable number via the toll free database that originated from any pay station, including inmate telephone service. Specifically, ANI II digits 27, 29, and 70 will be replaced with Code 25 under the above stated condition.

Questions concerning the contents of this letter may be referred to Rose Breidenbaugh, on 202 756-5779.
